Other
  Personality changes
  X Motor fidgeting or jerking
  Cognitive level changes

Behavioral Concerns (enter response from text box)

Inattention: fails to give close attention to details, difficulty in sustaining attention to tasks, does not always seem to listen when spoken to, does not always follow through on instruction, avoids or is sometimes reluctant to engage in tasks that require sustained mental efforts, is distracted by extraneous stimuli

Hyperactivity: fidgets, leaves seat, restlessness, on the go, talks excessively

Impulsivity: blurts out answers, difficulty awaiting turns, interrupts others, intrudes on others

Other: motor fidgeting and jerking as Dr. Marshall points out
